(54) Title: METHOD AND DEVICE FOR DOWNLOADING SETTINGS FOR AN APPLICATION

(57) Abstract: The invention relates to a method for downloading settings for an application into a device e.g. facilitating a request for subscription to a service. The invention also relates to such a device. The device is programmed in dependence of at least one predetermined application, such that the device is adapted to display a menu in which a user may navigate, the menu being associated with said application and guiding the user. The device is actuated by means of a keystroke while in said menu causing the device to contact a server and download the settings for the application. Preferably, the device contacts the server over the air by calling a telephone number loaded into the device and associated with said application, and a session is established with the server, wherein questions and answers are presented in further menus in the device. Thus, the device is prepared by providing customised application specific menus, which are self-instructing and user friendly. The menus guide a user to select the required keystrokes, the number of which is as low as possible.
